*Let's Eat Cake*

Cake Cutting Tips

1. Start by taking out all cake dowels.

2. Carefully take apart each cake tier.

3. Mark off each side of your cake to make sure each piece is cut similarly, ensuring everyone gets the same portion size.

4. Cut each slice rectangularly one inch wide and two inches deep.

5. Start by cutting the largest tier first. Wipe your knife in between slices to ensure each piece is cut evenly.
   If you're able to, save your top tier to freeze for future anniversaries. Also, save a little cake to enjoy the next day, while opening gifts with your loved ones.
